PROFILE

Computer Systems Technician - Networking student with hands-on project experience in cloud infrastructure, Linux administration, containerization, secure networking, and backend deployment. Interested in internships, technical opportunities, and practical engineering collaborations.

TECHNICAL SKILLS

Cloud & systems: Microsoft Azure, Ubuntu, Linux administration
DevOps: Docker, Docker Compose, Git, GitHub Actions, CI/CD
Networking: WireGuard, Caddy reverse proxy, HTTPS, networking
Backend & data: Flask, Gunicorn, backend APIs, PostgreSQL
Learning interests: Practical AI tools and infrastructure automation

SELECTED TECHNICAL PROJECTS

Azure Cloud Portfolio Server
Built a cloud portfolio project around an Azure Ubuntu VM, Docker containers, domain routing, and a Caddy reverse proxy. Maintains website source and deployment configuration in GitHub.

WireGuard VPN Environment
Configured a containerized WireGuard environment as a practical project in secure networking and remote access.

Backend API & PostgreSQL
Developed backend services for portfolio interactions using a documented Flask, Gunicorn, and PostgreSQL stack.

GitHub Actions Delivery
Implemented Git-based deployment workflows and explored repeatable delivery practices for a cloud-hosted portfolio.

EDUCATION & DEVELOPMENT

Computer Systems Technician - Networking student.
Independent hands-on learning in cloud systems, DevOps workflows, secure networking, and practical AI tools.
